

Milligan Bio-Tech Inc. is a privately held company with its main operations in Foam Lake, Saskatchewan. The facility officially opened in June 2009 and has steadily grown its customer base for bio-diesel and allied products. Bio-diesel is currently sold into Western Canadian markets. Milligan's other products are sold throughout Canada both directly through Authorized Dealerships and through their Distributor network.

With plans for rapid and immediate growth Milligan Bio-Tech Inc is currently seeking Plant Operators for its seed crush and biodiesel plants located at Foam Lake, Saskatchewan. Plant Operators are required to work shifts (12 hour rotating to support 24/7 operation). They are required to operate production equipment to ensure safe, reliable and cost effective production of Milligan's products. Depending on the skills and qualifications of candidates they will be placed into one of three operating levels with an appropriate hourly pay rate.

Specific duties and responsibilities of the position will include:

- Monitor the process (both manual readings and PLC based equipment) and make process adjustments (manually or through the PLC) to ensure safe, sustainable and cost effective production performance
- Follow production operating procedures to start up, shut down and optimize the process
- Record plant data manually and electronically as required
- Identify operational problems and make adjustments as per procedures and/or notify Production Manager
- Identify improvements and work with the plant's Production Team to successfully implement changes
- Participate in regular toolbox meetings providing appropriate guidance and support to activities focused on safety, production and reliability
- Participate in planning activities for shut downs, budgeting, project implementation etc. as required
- Support and follow corporate policy and processes
- Work effectively with the Production Team to achieve the needs of the business
- Represent the company and its shareholders in a favourable manner at all times
- Act with the highest level of professionalism, integrity and ethical character at all times
- Other responsibilities as required

Qualifications

The ideal candidate must have

- Previous experience in plant operations, farming activity or other similar work
- Demonstrated ability to learn basic technology related to a process and to think critically with respect to troubleshooting, changes and improvements
- Demonstrated mechanical proficiency
- Minimum grade 10 mathematical proficiency
- Ability to read and follow operating instructions
- A level of health and fitness suitable for the required tasks and activities of the position
- Good interpersonal and communication skills
- Ability to use a computer

Additional qualities of the ideal candidate include

- Power Engineering certification (level 5 or higher)
- Previous experience in senior operations or maintenance positions in a chemical, food or manufacturing facility
- Post secondary education
- Experience with process software, spreadsheets and/or databases

Interested candidates should send their resume and cover letter via email to randerson@milliganbiotech.com with "Plant Operator" as the subject. Only candidates selected for an interview will be contacted.
